Long-Term Monitoring Calculus

TWO LONG-TERM MONITORING PLANS

A. CONVENTIONAL PLAN:

10 Wells Quarterly for 30 Years

B. OPTIMIZED PLAN:

Six Wells Twice/Yr for 30 Years

<u>\$</u>	<u>NPV \$</u>
\$ 1,200 K	\$ 615 K
↓	↓
<u><u>\$ 360 K</u></u>	<u><u>\$ 185 K</u></u>

COST SAVINGS: 70%

Current LTMP Negotiation Process

Owner Collect, Analyzes Site Data

What are conditions at site?

Owner Submits Multiple Reports Over Several Years

What are the data saying?

Owner, Regulators Negotiate Long Term Monitoring Plan

*What is the bottom line on
this plume?*

Obstacles to Effective Negotiations

- *Historical data not all in one place - it is difficult to get “birds-eye view” of plume over time.*
- *Trends are not always clear due to data scatter.*
- *No formal mechanism to say which wells aren’t needed.*
- *No mechanism to keep regulators updated on LTMP results.*

MAROS Benefits

- *Storehouse/presentation tool for site historical data .*
- *Provides statistical information on trends.*
- *Tool for identifying “redundant” wells.*
- *Help “optimize” sampling frequency, number of wells.*
- *New data goes in, updated report automatically comes out.*

MAROS Caveats

- *Microsoft Access database - needs to be maintained .*
- *Best for small to medium sites (<50 wells).*
- *No real mapping capability at this time.*
- *Can't fix bad plumes.*

Key Concept: Knowledge of Plume Trend Can Translate into LTMP Cost Savings

Example 1:

expanding, chlorinated, fast gw

More Intensive LTMP: MORE wells, MORE frequent

Example 2:

shrinking, BTEX slow gw:

More Intensive LTMP: FEWER wells, LESS frequent

MAROS provides a first-cut blueprint for a LTMP

MAROS Software - Key Themes

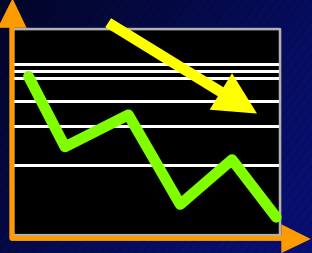

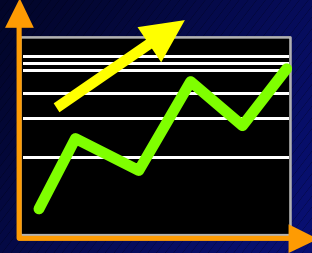

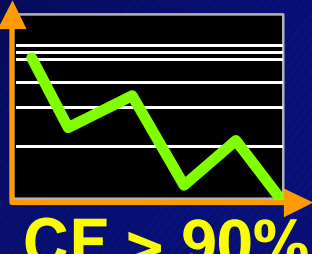

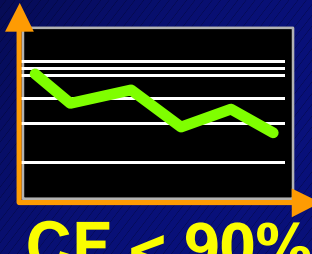

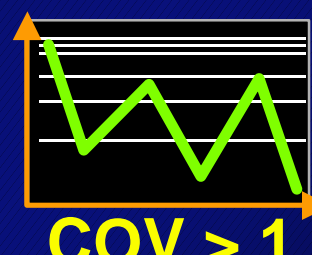

- **AFCEE Tool:** Keep it simple & free
- **“Evergreen”:** Can update data, develop new modules
- **Based on Lines of Evidence**
 - *Primary LOE: Conc. vs. Time Data, Simple Stats*
 - *Secondary LOE: Simple Models, Empirical Data*

Mann-Kendall Test: Approach

	Event 1	Event 2	Event 3	Event 4	Event 5	TOTAL POINTS
	13.95	42.08	33.90	33.67	18.05	
Compare To Event 1		+ 1	+ 1	+ 1	+ 1	+ 4
Compare To Event 2			- 1	- 1	- 1	- 3
Compare To Event 3				- 1	- 1	- 2
Compare To Event 4					- 1	- 1
						<u>- 2</u>

Interpretation of Mann-Kendall Tests

MK Statistic (S)	 <p>Decreasing Trend $MK < 0$</p>	 <p>Increasing Trend $MK > 0$</p>
Confidence Factor (CF)	 <p>Strong Trend $CF > 90\%$</p>	 <p>Weak Trend $CF < 90\%$</p>
Coefficient of Variation (COV)	 <p>Stable Trend $COV < 1$</p>	 <p>Fluctuating Trend $COV > 1$</p>

Mann-Kendall Test Results: Interpretation

		Confidence Factor		
Mann-Kendall Statistic	MK < 0	CF > 95%	90% < CF < 95%	CF < 90%
		Decreasing	Prob. Decreasing	COV < 1 <i>Stable</i>
				COV > 1 <i>No Trend</i>
	MK > 0	Increasing	Prob. Increasing	No Trend

Linear Regression Analysis

- Parametric test; assumes log-normal distribution
- Minimum amount of data for meaningful results
- Returns Log Slope regarding trend
 - Negative number: *declining trend*
 - Positive number: *increasing trend*
- Some interpretation of what Log Slope means

Lines of Evidence

- ***Primary Lines of Evidence***

- ➔ **Secondary Lines of Evidence
(Optional Lines of Evidence)**

Secondary Line of Evidence: Models

BIOSCREEN

- **Petroleum Hydrocarbon Sites – BTEX**
- **Biodegradation:**
 - *1st Order Decay or*
 - *Electron Acceptors*

www.epa.gov/ada/kerrlab.html

BIOCHLOR

- **Solvent Sites**
- **More Complex Biodegradation:**
 - *Sequential Reactions*
 - *Different Zones*

www.gsi-net.com

Secondary Line of Evidence: Models

How to use a model to determine plume stability

Step 1

Calibrate model to existing monitoring data.

Step 2

Increase time to 25 years in the future.

Step 3

See if plume gets larger.

Secondary Line of Evidence: Empirical Data

“Plume-a-thon” (multiple-site statistical) studies:

- BTEX plumes in California, Texas, Florida, and nationwide
- MTBE plumes in California and Texas
- Chlorinated solvent plumes nationwide: LLNL and AFCEE

Newell and Connor, API, 1998

MAROS Flow Chart

Enter Data, Reduce Data, Select Wells

1

Identify Site Constituents of Concern (COCs).

2

**Analyze Lines of Evidence (LOEs)
for Plume Stability (by well and by COC)**

3

- Increasing (I) 
- Probably Increasing (PI) 
- No Trend (NT) 
- Stable (S) 
- Probably Decreasing (PD) 
- Decreasing (D) 

LTMP DSS Flow Chart

4

Determine General Trend for Each Well Based On All LOE's

“Lump Lines of Evidence”

LOE	SOURCE	PLUME	WEIGHT
1	~ ~ ~	~ ~ ~	~ ~ ~
2	~ ~ ~	~ ~ ~	~ ~ ~
3	~ ~ ~	~ ~ ~	~ ~ ~
4	~ ~ ~	~ ~ ~	~ ~ ~

I

PD

5

Determine General Trend for Source and Tail

- Increasing (I)
- Probably Increasing (PI)
- No Trend (NT)
- Stable (S)
- Probably Decreasing (PD)
- Decreasing (D)

“Lump Wells” in Source and Tail Zone

MAROS Flow Chart

6

**Determine
LTMP
Monitoring
Category
for COC By
Source / Tail**

	Tail					
	PI	I	NT	S	PD	D
Source	PI	E				
	I					
	NT			M		
	S					
	PD					
	D					L

Monitoring Categories

E: Extensive

M: Moderate

L: Limited

7

**Specify Preliminary Monitoring
System Optimization Results based on Monitoring
category and site-specific parameters.**

- Well Density, Sampling Frequency, Sampling Duration

Result: Site-Specific LTMP Plan

8

1 page Report with Preliminary Monitoring System Optimization Results for each COC.

Results by COC

- Source Stability
- Tail Stability
- Monitoring Category
- Well Density
- Sampling Frequency
- Sampling Duration

Results	Site Classification							
	Fuel				Solvent			
	Big		Small		Big		Small	
	SLOW	FAST	SLOW	FAST	SLOW	FAST	SLOW	FAST
	COC1	~~	~~	~~	~~	~~	~~	~~
M	~~	~~	~~	~~	~~	~~	~~	~~
L	~~	~~	~~	~~	~~	~~	~~	~~

Sampling Frequency: Decision Matrix

<i>Time To Receptor:</i>	<i>Monitoring System Category</i>		
	E	M	L
Close (TTR < 2 yrs)	Quarterly	Biannually (6 months)	Annually
Med. (2<TTR<5 yrs)	Biannually (6 months)	Annually	Annually
Far (TTR > 5 yrs)	Annually	Annually	Biennially (2 years)

MAROS Road Map

Sampling Optimization

More Complex (Optional) Methods:

1 Sampling Location
(Delaunay Triangulation)

2 Sampling Frequency
(Modified CES)

Sampling Location Optimization

Significance of current sampling locations in monitoring network (eliminate “redundant” wells)

- **Delaunay Triangulation – area concentrations**
- **Does estimated concentration change if well is removed?**
- ***Utility for evaluating well removal***

MAROS Software Tool: Features

- Evergreen Database - based on MS Access
- Flexible import features (Excel, ERPIMS, etc.)
- Data Reduction Features
- C vs. T Plotting, Mann-Kendall, Linear Regression
- Input of Modeling, Empirical Evidence
- Evaluates Sampling Frequency, Well Density
- “Get off at any stop” Approach
- New version: Power Analysis, Moments, Graphics

Data Reduction: Part 1 of 2

Period of Interest

The current dataset contains data within the following time interval.

From: 10/4/1988 To: 12/19/1998

Specify the period of interest below or leave blank if you would like to use all of the data.

From: To:

Data Consolidation

Choose the option to define the time period to consider within the dataset.

☒ **Do Not Perform Time Consolidation**

☐ Quarterly

☐ Yearly

☐ Other Time Interval

Choose the option to define the representative statistical dataset.

☒ Median

☐ Geometric Mean

☐ Average

☐ Maximum (Highest)

TREND ANALYSIS

Help

Data Reduction: Part 2 of 2

Select the factors by which you would like to limit the data.

"Non-Detect (ND)"

- ☒ 1/2 Detection Limit
- ☐ Detection Limit
- ☐ Fraction of Detection Limit

"Trace (TR)"

- ☒ Actual Value
- ☐ 1/2 Detection Limit
- ☐ Detection Limit
- ☐ Fraction of Actual Value

Duplicates

- ☒ Average
- ☐ Maximum
- ☐ First Result

Help

Mann Kendall Statistics

The Mann-Kendall Analysis is used for analyzing a single groundwater constituent, multiple constituents are analyzed separately. Each "tab" below shows the statistics for one constituent.

See manual text or "Help" for description of trend determination method.

BENZENE | ETHYLBENZENE

Statistical Analysis Results. Last column is the result for the trend.

Well	S/T	COV	MK (S)	Confidence in Trend	Concentration Trend
M/V-15	S	0.000	0	42.3%	S
M/V-14	S	1.606	-50	99.9%	D
M/V-13	S	1.106	-53	99.8%	D
M/V-12	S	1.591	-68	100.0%	D
M/V-1	S	1.701	-15	98.5%	D
M/V-8	T	0.985	-11	70.5%	S
M/V-7	T	0.249	-7	62.6%	S
M/V-6	T	0.000	0	47.8%	S

Note: Increasing (I); Probably Increasing (PI); Stable (S); Probably Decreasing (PD); Decreasing (D); No Trend (NT); Not Applicable (N/A); Source/Tail (S/T); COV (Coefficient of Variation); MK(S) Mann-Kendall Statistic

Linear Regression Plot

Select a well and chemical below to graph. The concentration trend result in the box below reflects the chemical and well chosen to be graphed.
